Overview. Algorithmic information theory (AIT) is the information theory of individual objects, using computer science, and concerns itself with the relationship between computation, information, and randomness. The information content or complexity of an object can be measured by the length of its shortest description. For instance the string

Matt Might has a blog post "Order Theory for Computer Scientists" in which he concisely outlines some basics of order theory. It is a nice post but it is targeted towards computer scientists and is possibly only of interest to that audience, especially since all of his examples are in Haskell, not that there is anything wrong with that, but I think this is unfortunate as these ideas are ...
