The embryological origin of the mouth and anus is an important characteristic, and forms the morphological basis for separating bilaterian animals into two natural groupings: the protostomes and deuterostomes.. In animals at least as complex as an earthworm, a dent forms in one side of the early, spheroidal embryo. This dent, the blastopore, deepens to become the archenteron, the first phase in ...

The question of origins is plainly a matter of science history—not the domain of applied science. Contrary to the unilateral denials of many evolutionists, one's worldview does indeed play heavily on one's interpretation of scientific data, a phenomenon that is magnified in matters concerning origins, where neither repeatability, nor observation, nor measurement—the three immutable ...
