In the table above (and the two tables which follow), "Active pins" include the GPIO and ADC pins with which you can attach external devices to the ESP8266 MCU.

ESP8266 - Wikipedia

External RAM (PSRAM) ¶ You can enable external RAM using the next extra build_flags in platformio.ini (Project Configuration File) depending on a framework ...

You can modify the board to make the 3.3V FTDI a 5V FTDI. The trace that connects the 3.3V pad to the center pad on the back of the 3.3V FTDI breakout board just needs to be cut with an XACTO/hobby knife.

edit ReSpeaker 4-Mic Array for Raspberry Pi. ReSpeaker 4-Mic Array for Raspberry Pi is a quad-microphone expansion board for Raspberry Pi designed for AI and voice applications.

ReSpeaker 4-Mic Array for Raspberry Pi - Seeed Studio

A little more complicated is the ability to control a second I2C-device. The MPU-6050 always acts as a slave to the Arduino with the SDA and SCL pins connected to the I2C-bus. But beside the normal I2C-bus, it has it's own I2C controller to be a master on a second (sub)-I2C-bus. It uses the pins AUX_DA and AUX_CL for that second (sub)-I2C-bus. It can control, for example, a magnetometer.
