Definition. A VAR model describes the evolution of a set of k variables (called endogenous variables) over the same sample period ($t = 1, \dots, T$) as a linear function of only their past values. The variables are collected in a $k \times 1$ vector y_t , which has as the i th element, $y_{i,t}$, the observation at time "t" of the i th variable. For example, if the i th variable is GDP, then $y_{i,t}$ is the ...

Vector autoregression - Wikipedia

Dynamic stochastic general equilibrium modeling (abbreviated as DSGE, or DGE, or sometimes SDGE) is a method in macroeconomics that attempts to explain economic phenomena, such as economic growth and business cycles, and the effects of economic policy, through econometric models based on applied general equilibrium theory and microeconomic principles

Time Series Modelling 4 is a comprehensive package for linear and nonlinear time series modelling. It is free to private individuals for academic and educational purposes.. Support is not offered, but comments, feedback and bug-reports (also donations) are always welcome. TSM runs under Ox 7, and the 32-bit console version of Ox is also free to students and academics.
