A pressure vessel is a container that holds a liquid, vapor, or gas at a different pressure other than atmospheric pressure at the same elevation. More specifically in this instance, a pressure vessel is used to 'distill'/'crack' crude material taken from the ground (petroleum, etc.) and output a finer quality product that will eventually become gas, plastics, etc.

Set the safety device at not more than 105% design pressure. Inspect end closures and side ports regularly. Replace damaged or deteriorated components and correct the cause of any deviation. Relieve system pressure before working on the vessel. Working on vessels that are under pressure may result in bodily harm and/or property damage.
