In line with these comments, our assumption will be that activity in the quantum domain resembles in various ways the activity of human beings, this resemblance providing a basis for the possibility of systematic creation.

The Observer in Modern Physics Some Personal Speculations The phenomena of the cosmos require an observer in order to be learned about and understood by us. The observer can take many forms, for example:
1. A person watching amoeba through a microscope
2. A person watching an ocean sunset
3.

But within the field of quantum mechanics, research suggests that consciousness plays a more immediate role in determining reality as we shall see shortly. Quantum mechanics refers to the study of subatomic particles in motion.

Not only does the traditional interpretation of quantum mechanics have anti-materialist implications, but, as noted by more than one commentator, it is compatible with philosophical idealism (which makes mind the only fundamental reality) and even with solipsism (which makes one's own mind the only reality).

Consciousness and the misunderstood observer effect. April 14, ... In quantum physics, we know that the observer effect collapses wave functions into particles. ... So, those who claim observers *create* reality in this universe can only be true if either 1) the universe is a simulation; or 2) they live in a solipsistic universe.

Consciousness and the misunderstood observer effect

Quantum realism like physical realism is a monism that has one reality. Unlike physical realism it calls the quantum world real and the physical world the phantom.
